Comments: Ask ICCVAM how many non-animal testing methods they have implemented in their 5 year plan? How many have they implemented over the past 10 years of existence? How many of the live animal testing is mandatory for human safety?

Animals are being tortured their entire life and the majority of the time it is useless.

It is senseless and very inhumane to torture and test on a living creature when there is other non-animal alternative options that are already being implmented by other companies.

Please help these animal being used for experiments - call your representatives!!!
